

Column Tray-Cartridge Tray**Product Coding**
P11060....**Introduction**

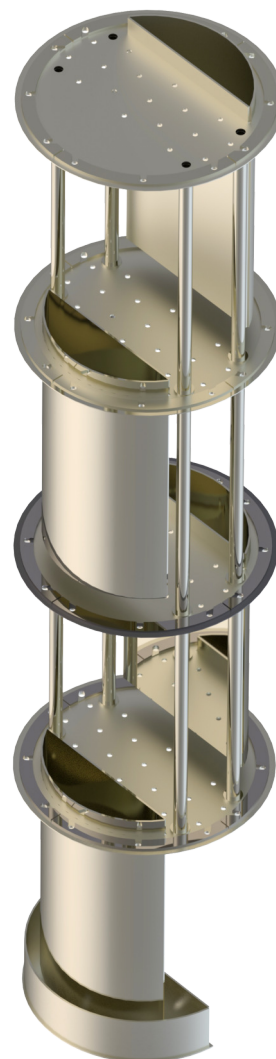

Cartridge trays are high performance, precision engineered tray systems designed for efficient mass transfer in distillation, absorption, and stripping columns. These trays are ideal for use in small diameter towers, particularly in situations with limited space or access. Their modular design allows for quick and easy assembly, making them a perfect choice for compact towers and pilot scale processes. Additionally, Euroslot Pars cartridge trays offer flexibility in tray deck configurations, such as moving valve, and fixed valve, as well as downcomer designs, ensuring consistent performance under demanding operational conditions.

**Features**

- Standard geometries available for pipe diameters up to 900 mm
- Compatible with various tray deck types
- Fixed downcomer and active area configurations ensure reliable hydraulic performance
- Adjustable parameters such as tray spacing, weir height, and downcomer clearance
- Designed for quick installation and alignment within standard pipe sections
- High corrosion resistance and long operational lifetime

Applications

- Distillation columns in chemical and petrochemical industries
- Absorption and stripping units in gas treatment systems
- Revamp and retrofit projects where space or access is limited
- Compact and pilot scale towers for process development or testing
- Small diameter columns requiring tray systems
